VET INC.

PROJECT OVERVIEW

Price Uplift Campaign

A structured pricing governance system designed to recover quiet revenue leakage through small, report-driven, and approval-based pricing adjustments.

April 2026 Vet INC

The Problem

Pricing drift is continuous — pricing review should be too. In most veterinary clinics, pricing is reviewed occasionally. Some items are adjusted, many are missed. Over time, prices drift behind inflation and strategic intent. The result is quiet revenue and profit leakage that compounds year over year. By the time a broad price increase is implemented, the gap has grown large enough to require a disruptive adjustment that creates friction with staff and clients.

The Approach

Three complementary initiatives, each targeting a different source of revenue leakage. Small, justified, approval-based changes delivered monthly.

1. **Inflationary Uplift**
   Catch items that drifted behind inflation or went unchanged for extended periods.

+

2. **99 Cent Factor**
   Apply psychological pricing to increase revenue without perceived price changes.

+

3. **Supplier Bump Margins**
   Capture incremental margin every time supplier costs increase.

Initiative 1 — Inflationary Uplift

INITIATIVE 1

Inflationary Uplift

A recurring monthly review of services and products that have drifted behind inflation or gone too long without adjustment. The system scans your full PMS price list, compares each item against cumulative inflation and time since last update, and produces a targeted recommendation report for leadership review.

- Identifies pricing gaps using actual PMS data — no guesswork
- Aligns prices with cumulative inflation since last change
- Flags items with extended periods since last update (e.g., 300+ days)
- Keeps drift small through modest, logical increases
- Prevents disruptive large catch-up moments that alienate clients
- Makes every pricing change defensible with clear rationale

EXAMPLE — HOW IT WORKS

Service Item	Current Price	Last Updated	Inflation Gap	Recommended
Canine Annual Exam	$68.00	480 days ago	+6.2%	**$72.20 (+$4.20)**
Feline Vaccination (FVRCP)	$32.00	365 days ago	+3.8%	**$33.20 (+$1.20)**
Dental Prophylaxis (Small Dog)	$285.00	612 days ago	+9.1%	**$311.00 (+$26.00)**

The system surfaces exactly which items need attention, by how much, and why. Leadership reviews the list and approves or adjusts each recommendation individually — nothing is automatic.

Initiative 2 — 99 Cent Factor

INITIATIVE 2

99 Cent Factor

A configurable pricing lever based on buyer psychology. The principle is proven across retail: **prices ending in .99 or .95 are perceived as significantly lower than round numbers**, even when the actual difference is minimal. This initiative systematically adjusts prices to capture the gap between what the client perceives and what they actually pay.

- Configurable by category, product type, or price threshold
- Forecasted uplift shown before any approval is required
- Supports competitive pricing on shoppable items (vaccines, preventives)
- Analyzes associated services to preserve overall visit economics
- Leadership defines parameters — system shows the expected dollar effect
- Can be applied selectively to specific categories or across the board

EXAMPLE — ROUNDING UP TO PSYCHOLOGICAL PRICE POINTS

Service Item	Current Price	Adjusted Price	Per-Visit Uplift
Comprehensive Exam	$82.34	**$84.99**	+$2.65
Feline Leukemia Vaccine	$38.50	**$39.99**	+$1.49
Microchip Implantation	$54.00	**$54.99**	+$0.99
Urine Analysis (In-House)	$26.75	**$28.99**	+$2.24

Clients perceive $82.34 and $84.99 as roughly the same — "about $80." Across 5,000+ annual transactions, these micro-adjustments compound to thousands of dollars in recovered revenue without any perception of price increase.

Initiative 3 — Supplier Bump Margins

INITIATIVE 3

Micro-Margin Increases During Supplier Bumps

When a supplier raises their cost, the clinic must adjust client pricing. Most clinics pass the increase through at cost — changing the client price by exactly the supplier increase. This initiative adds a **configurable micro-margin uplift (typically 1-3%)** on top of every supplier-driven price change. Because the client already expects a price adjustment, the additional margin capture is nearly frictionless.

- Triggers automatically when supplier cost changes are detected
- Layers a small margin increase (e.g., 2%) on top of the cost pass-through
- Client perceives one price change — not two — zero additional friction
- Compounds across hundreds of inventory SKUs over 12 months
- No separate approval cycle — embedded in existing cost update workflow
- Works alongside Initiatives 1 and 2 for layered revenue capture

EXAMPLE — SUPPLIER COST INCREASE WITH 2% MARGIN UPLIFT

Product	Old Cost	New Cost	Old Price	Pass-Through	With 2% Uplift
Interceptor Plus (L)	$18.50	$20.00	$42.00	$43.50	**$43.87 (+$0.37)**
NexGard (M)	$12.75	$14.00	$32.00	$33.25	**$33.92 (+$0.67)**
Revolution (Cat)	$22.00	$23.50	$48.00	$49.50	**$50.49 (+$0.99)**

A single supplier increase across 20 products, each selling 50-100 units/month, generates $500-1,500 in additional annual margin. Over a full year with multiple increases, this initiative alone can represent $5,000-15,000 in recovered profit per clinic.

Early Results

Findings from initial clinic deployments demonstrate significant opportunity across all three initiatives.

$74.6K	$27.3K	$27.5K	$130K+
Clinic A — Annual	Clinic B — Annual	Clinic C — Estimated	Combined Annual

What the data revealed: Reports showed many service items had gone hundreds — in some cases thousands — of days without a price update. The pricing drift was immediately visible at the ownership level, making the case for structured, ongoing review self-evident. When all three initiatives are layered together, the compounded effect is substantially greater than any single initiative alone.

Future Integrations

COMING SOON

Automated PMS Sync

Direct integration with AVImark and Cornerstone to pull pricing data and push approved changes without manual entry.

COMING SOON

Inventory Cost Tracking

Link purchase order costs to service pricing so markup erosion is detected automatically.

PLANNED

Competitive Intelligence

Monitor competitor pricing on shoppable items and services to inform strategic positioning.

PLANNED

Client Impact Scoring

Model the effect of pricing changes on client retention and visit frequency before approval.

Guiding Principles

The core beliefs that shape every recommendation.

D **Data-Driven**
Every recommendation backed by actual pricing data, inflation alignment, and usage patterns.

C **Leadership Control**
Nothing is pushed automatically. The system produces options — leadership decides.

T **Transparent**
Full visibility into what's changing, why, and the expected impact before approval.

R **Recurring**
Monthly cadence keeps gaps small and adjustments modest for teams and clients.

S **Surgical**
Targeted adjustments, not blanket increases. Each change has its own rationale.

L **Low Friction**
Smaller recurring adjustments are easier to absorb than larger periodic catch-ups.
